These scores represent the conservation value of a given 30-meter-square cell relative to other such cells in the MassConn region, with a score of 80.01-100 reflecting the highest value and therefore greatest importance for protection.

For more information about these scores, please visit: http://www.opacumlt.org/massconn/focus/

Map Layer Credits: Created 2016 by Scott Broda, Regional Conservation Coordinator for the MassConn Sustainable Forest Partnership, based on data analysis and mapping by Brian Hall, and made possible through the support of the Jessie B. Cox Charitable Trust and the Norcross Wildlife Foundation.
